

- bleed line** - extend background artwork to blue lines
- safety margin** - keep all important elements like text or barcode inside green lines

IMPORTANT

Disable or remove all layers except for artwork before exporting to PDF.

Export artwork in CMYK. It's highly important to provide artwork already prepared in this scheme since converting may cause unexpected changes in colors.

All bitmaps must be saved in 300 DPI resolution. Artwork saved with lower settings may turn out blurry/pixelized in print.
